

DETERS

- The greatest worry for any thief is being caught by the police
- When thieves see that your belongings are forensically protected they are more likely to pick an easier target

DETECTS

- Police actively look for any sign of forensic coding. This means lost or stolen belongings are more likely to be returned
- Forensically coded items are irrefutably connected to their owner. This makes it easy for the police to secure convictions

PROTECTS

- Helping to protect you from theft means we can continue to provide you with competitive premiums
- Our most important objective is to protect you from the irritation, inconvenience and stress that theft can cause

A single particle of Safeguard DNA+

is all you need to provide irrefutable forensic analysis

Each Safeguard DNA+ forensic microdot is just 1mm in diameter. Shown actual size next to a magnified illustration

Warning labels deter thieves

Caravan and motorhome protection with DNA+

Advanced forensic protection

whatever your traveling style

Safeguard are here to help protect the things that matter to you

At Safeguard we understand how important it is to help you protect your caravan or motorhome and treasured possessions against theft. This is why we now include within our service your very own Safeguard Forensic Coding technology system.

Your bottle of Safeguard Forensic Coding combines DNA+ solution with uniquely coded microdots registered exclusively to you. It is proven by police to be a powerful deterrent to thieves.

The solution is designed to be quick and easy for you to apply. Please follow the Safeguard DNA+ application instructions and use it on items that thieves would target. It is important to display the enclosed warning labels to immediately deter thieves.

We want you to avoid the trouble and stress that theft causes, so that you can relax and enjoy your caravan or motorhome.

Yours sincerely,

The Safeguard Team

How it works

We are giving you a Safeguard DNA+ system because it works as a powerful deterrent to theft and increases the chances of lost or stolen items being recovered.

Theft isn't just about losing property. We also want to help you avoid the upset and inconvenience associated with it.

The enclosed dispenser of Safeguard DNA+ is unique to you and your belongings and is already registered in your name. All you need to do is apply it and display the warning labels on your caravan or motorhome and your valued possessions.

Applying Safeguard DNA+ is quick and simple, it should take less than ten minutes. We advise you to display the warning labels and code your assets as soon as possible. Please take a minute to read all the information in this useful guide.

IMPORTANT SAFETY NOTICE: Please keep Safeguard DNA+ out of reach of children and animals. Safeguard DNA+ microdots are suspended in a water based forensic adhesive and although not toxic, care should be taken not to drink or allow it to enter the eyes. In the event of contact with eyes they should be flushed with clean water. Some sensitive skin types may be irritated by contact with the adhesive. In the event of contact wash with soap and water.

Liability for damage to property will not be accepted if these application guidelines are not followed correctly.

1

■ Apply warning labels first

If you do not have time to apply Safeguard DNA+ at this moment, apply the warning labels immediately to deter potential thieves

2

■ Where should I apply Safeguard DNA+?

On items that thieves can easily sell on

The best surfaces are those which are uneven and not on display, e.g. joints, indents, slots and grills

Avoid flat shiny surfaces and surfaces subject to wear

If you have concerns, we suggest that you test on an inconspicuous area or another similar surface beforehand

3

■ How should I apply Safeguard DNA+?

Ensure all surfaces to be coded are clean, dry and free from grease, oil or dirt

Shake the dispenser thoroughly for around 30 seconds (and occasionally whilst applying) to ensure that the particles are evenly distributed throughout the liquid

Unscrew the cap then dab the brush along the surface to be marked, gently rotating the brush between your fingers

Aim to apply the Safeguard DNA+ to a number of areas

The liquid is white when applied but clears as it dries

The coded microdots may be visible on light surfaces, which is why it should be applied in concealed areas

When finished, clean the top of the bottle and replace the cap securely

A few things to avoid

- Don't dilute the solution
- Don't apply it to moving parts, e.g. nuts and bolts, keys and switches
- Don't store or use in extreme hot or cold temperatures
- Don't write with the solution; a dab is all that is required
- Don't apply on to surfaces which you wish to remain clear of marking. If this happens, wipe immediately with a damp cloth
